

- (1) Will you please add three data points as shown below that show the delta between their chosen target % of carbs, protein and fat within their “daily caloric target” setting and their actual 10 day average. For example, my targets are 30% Carb, 25% Protein and 45% Fat, however because my average is currently 32% Carbs, 16% Protein and 52% Fat my DELTA shown below is +2%, -9% and +7%. (these numbers would always update as the new MACRO Averages update)
- (2) Also please put a little more space between the bottom of the colored circles and the text that says “Carbs” “Protein” and “Fat”
